BCSE302P - Database Systems

Cycle sheet –II - PL/SQL

Consider the schema you have used for exercise 1- 6 for the following PL/SQL programming:

Exercise - VII:

Aim: To understand the concept of PL/SQL Programming

1. Write a PL/SQL block to accept a value from primary key and display any corresponding value.
2. Write a PL/SQL program to delete one record from the table

Exercise - VIII:

Aim: To know the usage of different sequential control structures in PL/SQL effective programming

1. Write a PL/SQL block to find the whether a given number is odd or even.
2. Write a PL/SQL code as menu driven to perform arithmetic operations. (hint use: case selector....)

Exercise –IX :

Aim: To understand the concepts of Iterations and Subprogram (Procedures and Functions)

Iterations (outcome: c)

1. Write a PL/SQL code to print the numbers in reverse order from 100 to 1.
2. Create a pl/sql block to find the sum of series $1+3+5+\dots+n$.

Functions (outcome: m)

3. Write a function to give the number of rows in the table.
4. Write a PL/SQL to find the factorial of the given number using function.

Procedure

5. Write a procedure to accept an employee name and display his Department names.

Exercise - X:

Cursor

Aim: To understand implicit and explicit cursor in PL/SQL

1. Retrieve all the rows from the table using cursors.
2. Write a cursor program to display few records using joins.
