

Problems on Mode

1)

Find the mode and median from the following table :

<i>Marks</i>	<i>No. of students</i>	<i>Marks</i>	<i>No. of students</i>
0—10	2	40—50	35
10—20	18	50—60	20
20—30	30	60—70	6
30—40	45	70—80	3

2)

Calculate the mode of the following distribution :

<i>Monthly wages</i> <i>(in ₹)</i>	<i>No. of workers</i>	<i>Monthly wages</i> <i>(in ₹)</i>	<i>No. of workers</i>
50—70	4	150—170	8
70—90	44	170—190	12
90—110	38	190—210	2
110—130	28	210—230	2
130—150	6		

[**Hint.** Use the method of grouping for finding the modal class.]

3)

An incomplete distribution of families according to their expenditure per week is given below. The median and mode for the distribution are ₹ 25 and ₹ 24 respectively. Calculate the missing frequencies.

<i>Expenditure</i> :	0—10	10—20	20—30	30—40	40—50
<i>No. of families</i> :	14	?	27	?	15
